**Non-accessible Content**

The content listed below is not accessible for the following reason: non-compliance with Law 9 January 2004, no. 4.

Below are the non-accessible contents that may cause difficulties for people with disabilities:

- C.11.1.1.1 – Some non-textual content presented to the user does not have a text alternative that serves the same purpose;
- C.11.1.3.1 – In some cases, information, structure, or relationships conveyed through page presentation cannot be programmatically determined (or are not available via text);
- C.11.1.3.3 – Some instructions provided to understand and operate content rely solely on sensory characteristics such as shape, color, size, visual location, orientation, or sound;
- C.11.1.3.4 – The display and functioning of certain content do not vary depending on the screen orientation;

- C.11.1.4.3 – The visual representation of text and images containing text does not always meet the minimum required contrast ratio, except in cases permitted by regulation;
- C.11.1.4.4 – Some text, except for subtitles and images containing text, cannot be resized up to 200 percent without assistive technologies and without loss of content or functionality;
- C.11.2.1.1 – Some functions cannot be used via keyboard (or equivalent input interface);
- C.11.2.2.1 – There is a time-dependent element or event where it is not possible to: disable the time limit before it expires, adjust it, extend it up to 10 times, or notify the user before the time expires, except in cases allowed by regulation;
- C.11.2.4.3 – On some web pages that can be navigated sequentially, where the navigation sequence affects meaning and operation, certain objects that could receive focus do not receive it in an order that preserves meaning and usability;
- C.11.2.4.6 – Headings and/or labels do not sufficiently describe content or functionality;
- C.11.2.5.3 – For some user interface components with labels that include text or images of text, the name read by assistive technologies does not contain the visually presented text;
- C.11.3.3.2 – In some cases, labels or instructions are not provided when content requires user input actions;
- C.11.4.1.2 – In some cases, user interface components (including form elements, links, and script-generated components), names, roles, states, properties, and values are not correct or set, or users and their assistive technologies are not notified when these change;
- C.11.4.1.3 – In some cases, status messages are not presented to the user in a way that allows assistive technologies to interpret them without requiring a change of focus.
