“We have a simple solution: make the format of the exam dyslexia-friendly”

This year, students Anouk and Jord will be committed to improve the situation of dyslectic students at the Faculty of Science. They were awarded a budget for their idea developed during the Master's elective course Science Connect, within the Professional Skills learning trajectory. The aim of the campaign is to make students and teachers aware of the impact of text fonts and layouts of documents, especially during exams.

Outreach team!**

They explain: “A dyslexia-friendly format consists of a certain font, size and the use of spacing and white lines. The use of this format improves reading comprehension and also reduces the level of stress that is experienced by students. With our project we want to raise awareness among both students and teachers that this simple solution can have a big impact on many students”

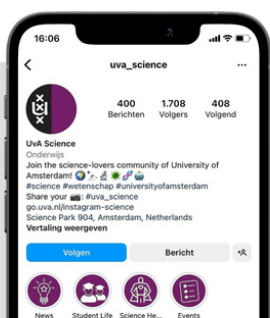

As a student at the Faculty of Science, you have the opportunity to give primary and secondary school children their first taste or a deeper understanding of science, by organising activities for the Science Outreach Department.

Want to participate in the research or share your own experience? Fill in the survey or send an e-mail.

You will guide these activities, share your knowledge and gain (work) experience too. Examples of activities are: masterclasses, science labs, guest lessons and community projects. The salary is €12.50 per hour. Note that only Dutch-speaking students can apply.
