# HOW CAN I MAINTAIN MY OUTDOOR PORCELAIN TILES?

Porcelain floor tiles are manufactured with high-quality raw materials that are put under extremely high pressure and baked at very high temperatures. They can withstand freezing temperatures and are therefore suitable for all outdoor environments. Their low water absorption also makes porcelain outdoor tiles virtually maintenance-free. It is impossible for any dirt, moss or mould to stick to their surface. You can achieve the very best long-term results by maintaining your patio tiles properly.

## STEP 1

After installation, clean your patio with **Lithofin KF Cement Residue Remover** to remove any grout haze and construction debris.

## STEP 2

Clean periodically with **Lithofin KF Intensive Cleaner** diluted in some water. Scrub, wait for 5 minutes and then rinse with water.

## FREQUENTLY ASKED QUESTIONS

### How can I remove barbecue grease stains from my patio tiles?

The rain and sun will make such stains disappear by themselves. If you want to remove the stains more quickly yourself, you can clean your patio with **Lithofin KF Intensive Cleaner**.

### How can I remove stains made by leaves, fruit or soil from my patio tiles?

**Lithofin MN Outdoor Cleaner** has been specially developed for thoroughly cleaning outdoor stone surfaces, such as patios, paths and stairs. This maintenance product is perfect for removing discolouration or stains caused by trees, flowers or plants.

## TIPS

- Avoid the use of any sealers and oily maintenance products. Because of the porcelain tiles' low porosity, such products will form a greasy layer on the surface.
- Always follow the instructions on the packaging of the maintenance products.
