Cameleon Granite (PTY) LTD - 18A Pendoring street, Ext 14 - 0250 Brits Industrial Area, Brits, NW, South Africa

Cameleon consists of a South African natural stone quarry and a modern production site for natural stone. From this site, Cameleon distributes, blocks, slabs and tiles in natural stone and blended materials. Cameleon is the exclusive extractor and producer of the granite Nari Black. Next to that, it also produces and distributes blocks and slabs in natural stone from other African suppliers.

Cameleon is a Brachot Family Member.

About Cameleon

We are a South African manufacturer of building and monumental granite slabs with a range of products to suite every requirement. Our collection and products are more than just a choice as we combine technology, of which we have the best in the country, and expertise in every phase of the production process to give you the best possible product. Cameleon is a Brachot Family Member.

From quarry into stock

The stone blocks originate from our quarry in South Africa. We mine the highest-quality stones and transport them to our site. We process our blocks and cut slabs into various thickness and finishes, in house, using the latest technology machinery. We at Cameleon Granite carry a large inventory of slabs and blocks in stock at all times.

About Brachot

Brachot extracts, produces and distributes landscape and surface materials in natural stone and blended materials. Brachot has the entire distribution in its own hands with its 20 quarries, 7 production sites and 14 distribution centers across Europe and Africa. This creates endless possibilities for the production of blocks, slabs, tiles and accessories for indoor and outdoor applications in natural stone and blended materials.

LEGENDARY FORCE OF NATURE

NARI BLACK

Named after the buffalo, Nari Black is a legendary force from the South African nature. It is a unique, weatherproof and robust granite with unlimited possibilities.

Frost Resistance

Stains, moisture or cold weather cannot damage Nari Black. The stone can cope with the most extreme conditions.

Low Porosity

Good pore structure. This makes the stone almost impermeable to water and pollutants.

Low wear coefficient

Nari Black enjoys a long life even in kitchens, hallways or outdoor.

High compressive strength

Nari Black is exceptionally hard and durable. It does not lose even a millimetre and it withstands heavy traffic.

All our finishes

Polished

The surface has a high gloss, reflective finish. The colours and texture are enhanced.

Anzano

This semi-coarse finish is slightly coarser than a matt or polished finish, but still feels very satisfying and soft. The non-slip result still has a beautiful satin shine to it.

Honed

The surface is slightly light-reflective, smooth, with a matt finish. No grooves will be visible.

Flamed

A flame is directed at the slab and causes a thermal shock. The surface will have rough, more or less glittering grains of irregular shape.

Letano

The soft brushed finish accentuates the natural colour of the material. The sloped surface has a unique "leather touch" feeling.

Sawn

Sawn is a rough surface done using a frame saw or a diamond wire. The surface will exhibit saw-cuts, small undulations, and lines.
