

Interconnected surface system

Preformed crosswalk and streetscape surfaces for asphalt and concrete

ENNIS-FLINT® by PPG TRAFFICPATTERNS® anti-skid preformed thermoplastic material has the look of traditional pavers and stones without the high cost, installation hassle, maintenance and safety concerns associated with the real thing.

The pattern and color combinations of these interconnected sheets allow designers the flexibility to create a unique crosswalk or streetscape that complements the overall aesthetic of the surrounding environment.

Design

Heavy-duty, intersection-grade pavement marking material

Interconnected, 125-mil sheets with anti-skid elements

Available in a variety of patterns, borders and colors

Installation

Less work and maintenance than traditional pavers

No custom tools, templates or grids needed

Open to traffic within minutes of application

Pedestrian Safety

Anti-skid elements distributed evenly throughout material for enhanced slip resistance

As material wears, new anti-skid elements are exposed

Compliance/Certification

ADA-compliant pedestrian and wheelchair friendly surface

Facility is ISO 9001:2015 certified for the design, development and manufacturing of preformed thermoplastic

Installation

TrafficPatterns preformed thermoplastic material is applied using a large infrared heater and a propane torch to finish tight corners, so it does not require capital-heavy investment in specialty equipment, customized tools, templates or grids. The 2' x 2' sheets of interconnected material can easily be lifted and positioned onto sealed asphalt or concrete surfaces prior to heating. Border segments can be added for design variability.

Need help? We can recommend certified applicators in your area or train your employees in proper application techniques. For more information, please contact your PPG sales representative.

Step 1: Prepare

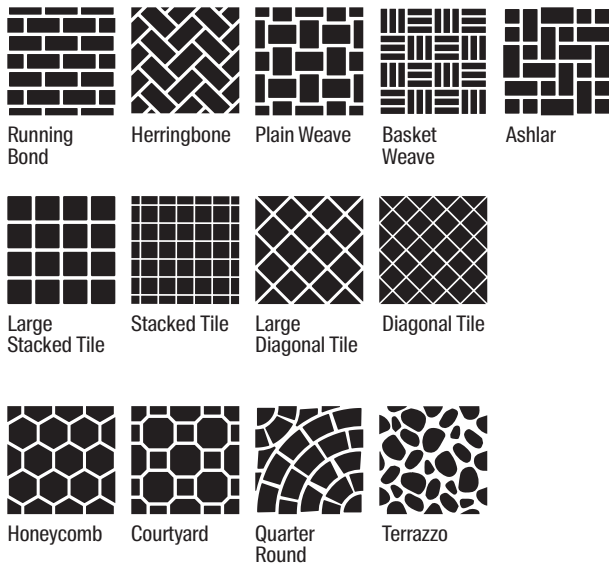

Step 2: Position

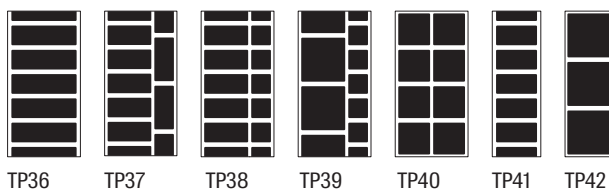

Step 3: Heat

Standard Patterns (2' x 2' sheets)
