

## **Rare thrombotic and bleeding disorders**

### **(Rare) disorders of thrombosis and hemostasis**

The Van Creveldkliniek holds a leading research position in the field of hemophilia, Von Willebrand disease and allied disorders of thrombosis and hemostasis. Our research focusses on disease mechanisms, development of advanced diagnostic tools and discovery and validation of new therapeutics for these complex disorders. The close collaboration with patient care and several pharmaceutical companies ensures a fully translational approach and allows rapid implementation of findings in clinical practice. There are several currently available research projects, including:

#### *Projects*

- *Interference of antiphospholipid antibodies with anticoagulant pathways*
- *Diagnostics of platelet function disorders*
- *Molecular characterization of platelet function disorders*
