

FOR APPLICATION DEVELOPMENT

Reduce security risk from bad open source packages and ensure the open source you rely on keeps getting better

Reduce security risk

by eliminating attack entry points through bad packages

Improve productivity

by reducing vulnerability fire drills from insecure or undermaintained packages

Improve application quality

by building with healthy and resilient open source packages

Increase operational efficiency

by saving costly manual package evaluation time

The Tidelift maintainer advantage

Tidelift is the only company that partners with open source maintainers and pays them to:

- ✓ Implement industry-leading secure software development practices and validate the practices they follow so organizations can have the same confidence in the security of their open source that they have in their own code.
- ✓ Contractually commit to continue these practices into the future so that organizations can confidently make long term investments in the packages they use.

Maintainer Tatu Saloranta used income from Tidelift and its customers to completely rearchitect jackson-databind and eliminate the risk of RCE vulnerabilities.

Maintainer Jordan Harband saved minimist from deletion when its maintainer decided to delete their projects from GitHub.

When SockJS maintainer Bryce Kahle took a new job that didn't involve JavaScript, Asif Saif Uddin stepped in as maintainer, ensuring the project wasn't abandoned.

Tidelift helps leading organizations use open source with confidence
