

Integrated code quality and security in your cloud workflow with SonarQube Cloud

3 Billion+ Lines of Code

analyzed every month

180,000+

active projects

6,500+

coding rules

A fully managed, cloud-based static analysis tool for your CI workflows. Seamlessly integrates with major DevOps platforms to ensure secure, reliable, and maintainable software. It detects code quality and security issues across 35+ languages, providing in-depth analysis and reporting through automatic scans. Together with SonarQube for IDE, it delivers a powerful end-to-end solution from IDE to CI, ensuring every line of code committed and merged, developer-written or AI-generated, is issue free.

ACCELERATE CODE REVIEWS

Fix issues early in your development workflow, reduce technical debt and focus developers on innovation.

RELEASE WITH CONFIDENCE

Transform your development with actionable code intelligence that drives better, more secure code.

IMPROVE DEVELOPMENT VELOCITY

Developer-first security analysis for all code: open source, developer-written, and AI-generated ensures faster, better software.

"With SonarQube Cloud we enabled our engineering teams to drive consistent code quality and standards across the whole organization."

Andre Ostermeier, Lead
Solutions Architect, relayr.

- Support for 35+ languages, frameworks, and IaC platforms
- Automatic analysis of projects, no configuration required
- Enterprise authentication with SAML, management reports, portfolio views
- Fast and accurate code analysis to ensure security, reliability, and maintainability
- Security vulnerability detection
- AI-driven fix suggestions and Sonar AI Code Assurance verification
- Actionable, highly precise results
- Clear go/no-go quality gate automatically failing CI/CD pipelines
- Remediate code flaws as part of the existing development workflow
- Actionable insights and rich reporting

Free

For developers wanting to try SonarQube

- Scan your private projects (up to 50k lines of code)
- Scan unlimited public projects
- 30 languages and frameworks
- Max. 5 users
- Issue detection and SAST
- Main branch & pull request analysis
- DevOps platform integration

Team

Essential for teams and businesses

- All features in the Free tier plus:
- Unlimited users
- Commercial support available
- Advanced SAST
- Advanced secrets detection
- AI CodeFix
- AI Code Assurance
- Analyze feature and maintenance branches
- Customize quality standards

Enterprise

Mission critical, scalability, performance

- All features in the Team plan plus:
- Additional 6 enterprise languages
- Commercial support available
- Enterprise SLA
- Single sign-on (SSO)
- Enterprise organization hierarchy
- Portfolio management
- Comprehensive security reporting
- Detailed health insights
- 24/7 premium support (additional fee)

TRUSTED BY OVER 7 MILLION DEVELOPERS AND 400,000 ORGANIZATIONS
