MULTI-FOLD LEAFLET

FLUBENOL™ 5%

Active Ingredient: 50 mg/g Flubendazole

Oral wormer for pigs and poultry

Flubenol 5% is indicated for worm infestations in pigs and poultry.

Pigs: infestations with gastrointestinal worms (*Ascaris suum, Hyostrongylus rubidus, Oesophagostomum dentatum, Trichuris suis, Strongyloides ransomi*) and lungworms (*Metastrongylus apri*).

Poultry: infestations with gastrointestinal worms (*Ascaridia galli, Heterakis gallinarum, Capillaria spp., Amidostomum anseris* and *Trichostrongylus tenuis, Raillietina sp.*) and gapeworm (*Syngamus trachea*).

DOSAGE

PIGS

For treatment of piglets and fatteners: 30g flubendazole per ton of feed (30ppm) for 5 consecutive days in case of a severe infestation with *T. suis*, the animals should be treated for 10 days.

For treatment of breeding pigs: 30g flubendazole per ton of feed (30ppm) during 10 consecutive days.

Individual and single administration to breeding pigs:

Flubenol 5% is strewn over the feed in a dose of 5mg per kg of body weight. This corresponds to 1 measuring spoon per 130kg body weight.

Text above this line is not included in the actual label.

POULTRY

Turkeys: 20g flubendazole per ton of feed (20ppm) for 7 consecutive days.

Chickens and geese: 30g flubendazole per ton of feed (30 ppm) for 7 consecutive days.

In case of infestation with tapeworm (*Rallietina sp.*) give 60g flubendazole per ton of feed (60ppm) for 7 consecutive days.

Pheasants and partridges:

60g flubendazole per ton of feed (60ppm) for 7 consecutive days.

DIRECTIONS FOR USE

Flubenol 5% should be mixed into the feed and the mixture administered.

For a group treatment, make sure that all animals take in enough Flubenol 5%. The medicine should therefore be well mixed into the feed so that a homogenous mixture is obtained. It should not be strewn over pellets or crumbs since this gives a nonhomogeneous mixture.

- 20g flubendazole per ton (20ppm) corresponds to 400g of Flubenol 5% per ton of feed.
- 30g flubendazole per ton (30ppm) corresponds to 600g of Flubenol 5% per ton of feed.
- 60g flubendazole per ton (60ppm) corresponds to 1.2kg of Flubenol 5% per ton of feed.

For small numbers of animals, 1 measuring spoon of Flubenol 5% is mixed into the following amounts of compound feed for the following species: pheasants and partridges: 11kg; chickens and geese: 21.5 kg; turkeys: 32kg.

Important:

Treatment with Flubenol 5% gives optimal results only when strict hygiene of the pig sheds and the poultry houses is practiced.

CONTRAINDICATIONS

The use of Flubenol 5% is contraindicated in pigeons and parrots.

SIDE EFFECTS

In pigs an overdose in the feed of 250 ppm flubendazole or higher (i.e. more than 8 times the normal dose) can bring about short-lasting diarrhea (soft or watery dung), without other clinical signs or effects with reference to the growth of the animals. This loose dung occurs from the second treatment day and is maximal after around 7-12 days.

In poultry even 3 times the highest dose (180 ppm flubendazole) for 7 days had no negative effects on egg production, egg quality, hatching results growth of offspring or in any other respect.

By law the user must take due care, obtaining expert advice when necessary, to avoid unnecessary pain and distress when using the product other than as directed on the label.

WITHHOLDING PERIODS:

PIGS

MEAT: Pigs producing meat or offal for human consumption must not be sold for slaughter either during treatment or within 7 days of the last treatment.

CHICKENS

MEAT: Chickens producing meat or offal for human consumption must not be sold for slaughter either during treatment or within NIL days of the last treatment.
