

Blowfly prevention range - correct application

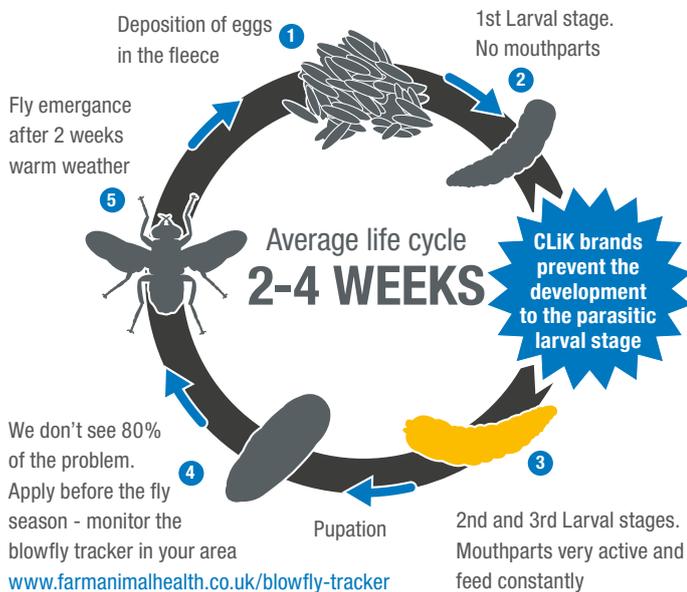

The CLiK™ family

Duration of cover depends on correct application

CLiK EXTRA	Longest lasting, 19 weeks prevention - 40 days meat withhold
CLiK	Long lasting, 16 weeks prevention - 40 days meat withhold
CLiK ZIN	8 weeks prevention - 7 days meat withhold

How CLiK™ brands work

The CLiK brands are the only insect growth regulators (IGR) containing **FleeceBind™** technology which provides full fleece protection. It helps spread the formulation from tip to base of the fleece and binds it strongly in place, sticking it to the wool. Other areas may not be protected, including the feet. Learn how FleeceBind works at www.farmanimalhealth.co.uk/sheep/sheep-blowflies/blowfly-product-options

Top tips to achieve correct application and full duration of cover of the CLiK family

The Insect Growth Regulators (IGRs), CLiK™ EXTRA, CLiK™ and CLiKZiN™ are the only blowfly products with FleeceBind™

- Always use the correct applicator pour on gun with the correct **Fan-spray Nozzle** and ensure it is clean and in good working order. Always calibrate the applicator gun to check it is delivering the correct dose - Watch the calibration tutorial @ www.farmanimalhealth.co.uk/sheep/sheep-blowflies/blowfly-product-application
- Weigh the sheep and treat to the heaviest in the group. If there is a large variation in weight, split the group to avoid under-dosing;
- If possible treat the sheep in a pen not a race. The pen should be approximately three-quarters full of sheep allowing room for both the sheep and you to move around;
- Aim to achieve a spray width approximately 10-15cm on the sheep. This is best done by holding the applicator gun approximately 45cm away from the sheep during application;

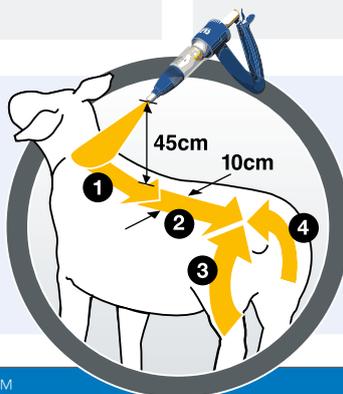

The CLiK™ family

- Always ensure the fleece is not soiled. If it is, dag prior to application. If the sheep become dirty after application, dag and then re-apply the product around the area where you have removed the fleece.
- Do not apply during heavy rainfall or when such conditions are expected. The resulting washout may reduce the protection period.
- After application care should be taken to avoid the product being rubbed off. It is best to leave application of CLiK™ brands until after completing all other routine work.
- Sheep with lameness or dirty fleece may still suffer flystrike; this should be treated with a suitable product such as Crovect™. Find out more at www.farmanimalhealth.co.uk/products/crovect

- 1 ¼ of dose midline, from shoulders to mid-back
- 2 ¼ of dose midline, from mid-back to top of tail
- 3 ¼ of dose to one side of animal's tail and crutch
- 4 ¼ of dose to other side of animal's tail and crutch
