

PERMA-CRETE® HIGH BUILD 100% ACRYLIC TOPCOAT

High Build Coatings - 4-22XIC/4-40XIC Series

PROVIDES EXCEPTIONAL PROTECTION AND DURABILITY

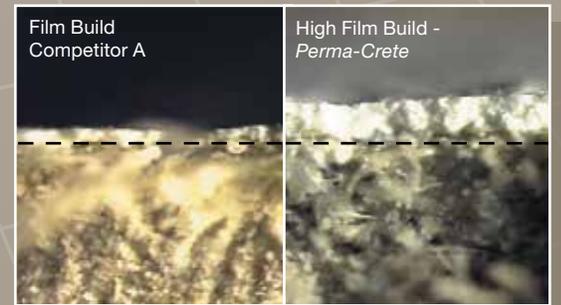

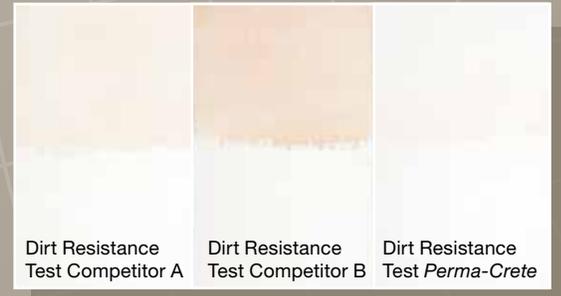

PROTECTION AGAINST THE ELEMENTS

Provide efficiency and protection on all of your masonry jobs with low-VOC *Perma-Crete* High Build 100% Acrylic Topcoat from PPG. This premium topcoat is the perfect choice for those needing a flexible, high build coating. Its heavy duty properties protect against severe sun, heat, humidity, dirt, salt and efflorescence, thereby extending the repaint cycle. The high solids of this topcoat fill and bridge existing hairline cracks while providing a water-resistant coating. As the coating works to keep wind-driven rain out, it allows moisture vapor from the interior to escape, preventing mold and mildew growth inside the building wall.

MINIMIZE PROJECT COSTS

Perma-Crete High Build Acrylic Topcoat is formulated to be durable and maintenance-free. It offers a flat finish that will both decorate and protect exterior masonry surfaces. This self priming coating can be easily applied to fresh concrete surfaces older than 7 days, accelerating the construction schedule, and minimizing overall project cost by allowing you to use one less coat.

Perma-Crete High Build Topcoat is specifically designed for use on a variety of interior and exterior, above-grade masonry surfaces with performance that far exceeds that of conventional paint.

WHY PERMA-CRETE HIGH BUILD 100% ACRYLIC TOPCOATS?

- Highly elastic to help bridge cracks
- Blocks wind-driven rain from getting into the masonry
- Self priming and can be applied to fresh concrete surfaces after 7 days
- Breathable finish prevents moisture from being trapped
- Resists alkali, efflorescence and mildew growth
- VOC Compliant - Lower than current Federal AIM & OTC Regulations <50g/L
