MAGNUM HEAT TORCH

FEATURES

- Produces 210,00 to 300,000 BTU at sea level
- 16" handle torch with igniter
- All brass torch body
- Single fire shroud with Piezo lighter
- Pressure regulator and 25 ft. of flexible hose
- Utilizes an accelerated thrust of air heated by a short flame
- Lightweight and balanced design with an aluminum counterweight to decrease operator fatigue
- Automatic safety shut off valve in case of leakage or breakage of hose or connector
- UL listed and approved
- 12 month warranty covering parts and labor. Damage due to negligence, misuse or accident is exempted

The Magnum Heat Torch is a simple and cost-effective method of applying preformed thermoplastic pavement marking materials.

The Magnum Heat Torch with self-contained torch ignition is a wide mouth propane torch for applying preformed thermoplastic pavement markings such as HotTape®. Torch assembly must be used with a D.O.T. approved container equipped with a U.L. listed shut-off valve. It is important to always use the two-hand grip handles to properly direct the flame toward the pavement.

Carefully read and follow the manufacturer's application instructions for proper installation of preformed thermoplastic pavement markings. For complete information about assembly, operation, precautions, and warnings, refer to the "HotTape® Magnum Heat Torch: Instructions For Use and Safety Measures" prior to applying HotTape®.
