

“Pouring Off” Toners

It has been our policy not to recommend “pour-offs” of PPG toners due to the risk of contamination or inaccurate labeling. However, we do understand our distributors may need to engage in this practice when servicing the Mobile Touch-up market.

To insure accurate labeling and minimize contamination, the following procedures are recommended only for servicing the Mobile Touch-up market.

1. A Barex 25 bottle must be used:
 - Bottle is DOX461
 - Lid is DOX462
2. A special BC 8oz label is available:
 - Form 5737, L18ZB

Note: *To maintain color and consistency toner must be properly agitated prior to “pouring off”.*

Bottles and labels are currently only available from our Lima Warehouse.
