

PPG LABORATORY TEST RESULTS CERTIFICATION

TABER ABRASION

PPG Industries, Inc. certifies the following performance properties for the Duranar® Coil Coating System when applied and baked on properly cleaned and pretreated substrates, according to PPG specifications:

COATING: DURANAR & DURANAR XLE

TEST: ASTM D4060 – Abrasion Resistance of Organic Coatings by the Taber Abraser

SPECIFICATION: The Duranar system is applied at uniform specified thickness to a flat panel of steel or aluminum and, after proper curing, the surface is abraded by rotating the panel under weighted abrasive wheels. Abrasion resistance is calculated as loss in weight at a specified number of abrasion cycles.

RESULTS: Duranar will sustain < 250 mg. of film loss after 1000 cycles, using 1000 gram weights and CS 17 abrasion wheels.
