

# DECISION MAKING

## Decisions

There are 3 elements to your decisions:

**Technical** *(the decision you give)*

What did you actually see? Positioning is key!

**Management** *(The action you take)*

Is there advantage to be played.

Does it need a word, a FH or is it more than just a FH. Is it repetition, have you identified a breakdown of play/reckless play? Does it need a personal /team penalty?

**Communication** *(how you whistle and speak & what you say)*

Have you helped the players to understand? This helps to manage the game!

# Key considerations when making decisions

What you need to think about when watching the play

**1. Has there been an offence and by whom?**

**2. If so, do I need to blow my whistle or can I play on?**

**3. If there has been an offence, do I need to do something more or say something?**

**Who is the initial receiver of an aerial ? - 45 degree : SCAN.**

Have they the ball under control.

Is the intercept safe?

Blow quickly on danger

### **WATCH OUT FOR:**

Tackles coming in from the side and behind- high risk.

Does the tackler's stick meet the ball or stick first.

A flat stick can't offend.

Push in the back, shove from the side – RAISE YOUR VISION

# THE SHAVE TACKLE

**Defender makes a sweeping challenge from behind moving the ball away from the ball carrier when they lift their stick off the ball.**

**The tackler must not make contact with the ball carrier's body or stick as they take the ball.**

**Where does the ball go?**
