

# Non-stick coatings for PTFE and sol-gel technology

## Standard color offering

A specifically curated library of colors  
chosen to meet all your non-stick needs

We protect and beautify the world™

## Non-stick coatings that look as good as they perform

Our non-stick coatings are specifically engineered to not only provide the performance your customers expect, but the colors they demand. This includes nearly 50 standard shades ranging from black and blue to red, copper and champagne – all hand-selected based on overall industry trends as well as customer demand.

Colors are available in either spray PTFE or sol-gel technologies and across all major kitchenware and industrial bakeware segments. This is to help ensure you find the right color to match nearly any interior application. Please note that PTFE-based coatings may only be available in certain systems. Consult your PPG representative to learn more or to inquire about exterior color options.
