

Durable markings for airfields

Achieve increased value and performance with durable preformed thermoplastic pavement markings

ENNIS-FLINT® by PPG AIRMARK® durable markings for airfields are engineered to meet federal specifications with the objectives of safety, durability, workmanship and proven performance.

Available in five standard colors:

Design

Designed for use on taxiways, ramps, aprons, gates, as well as vehicular roadways on the airside
Provides a sensible solution with efficient life cycle performance and savings while complementing your total airfield marking program.

Installation

Application method has significant advantages, especially in application of multi-color markings that are typically labor intensive using paint
More markings can be applied during the time of runway closure

Safety

An essential element of a Safety Management System because traffic guidance is provided on all areas of the runway
Retroreflective glass beads are mixed throughout material at time of manufacturing. As the marking wears new beads are exposed for retained retroreflectivity

Compliance/Certification

Inscriptions on surface signage made according to current FAA AC 150/5340 or ICAO standards accordingly
Facility is ISO 9001:2015 certified for the design, development and manufacturing of preformed thermoplastic
