4547	Excision, excessive skin and subcutaneous tissue (includes lipectomy); abdomen; infraumbilical panniculectomy		Yes		<p>Pre certification is required. Benefit is payable for procedure code 4547 only in the following circumstances;</p> <ol style="list-style-type: none"> 1. The patient must be at their base weight and must have remained weight stable for at least 12 months. Stable Weight can be defined as "Where the patient's body weight remains relatively constant, fluctuating no more than approximately +/- 5% of body weight over a period of at least six months." 2. Major weight loss. (30-40% or greater loss of excess weight) provide starting weight and current stable weight 3. 18 months Post Partum 4. Photographs may be required on request (Standing photographs of the member must clearly demonstrate excessive skin and subcutaneous tissue in the area being excised, and in the case of a request for panniculectomy, standing photographs (frontal and lateral) must clearly demonstrate that the panniculus covers the member's mons pubis) 5. The excessive skin and subcutaneous tissue in the area being excised <ul style="list-style-type: none"> - Significantly interferes with the performance (impaired physical function) of normal activities of daily living - chronic intertrigo (dermatitis occurring on opposed surfaces of the skin, skin irritation, infection or chafing) that consistently recurs over 3 months while receiving appropriate medical therapy, or remains refractory to appropriate medical therapy over a period of 3 months. 6. The excessive skin and subcutaneous tissue in the area being excised is grade 3 or above where the following grading applies: <ul style="list-style-type: none"> Grade 3 Panniculus extends to cover the upper thigh. Significant overhang that causes physical discomfort, hygiene issues, or skin infections. Grade 4 Panniculus extends to mid-thigh. Severe overhang that severely limits mobility, causes chronic skin conditions, or leads to other health problems. Grade 5 Panniculus extends to the knee and beyond. Extreme overhang that severely impacts quality of life, extreme health risks and daily life limitations. <p>Note In extraordinary circumstances, panniculectomy may be performed to facilitate a complex surgical procedure, such as a hysterectomy and bilateral salpingo-oophorectomy performed via laparotomy. The criteria listed in the clinical indications regarding weight loss do not apply in this case.</p> <p>Exclusions</p> <p>Irish Life Health does not consider excision of excessive skin and subcutaneous tissue to be medically necessary under certain circumstances. Examples of such circumstances include, but are not limited to, the following:</p> <ol style="list-style-type: none"> 1. The member has difficulty fitting in clothes 2. A panniculectomy is being performed at the same time as bariatric surgery. 3. A panniculectomy is being performed to prevent hernia occurrence or to prevent hernia recurrence in conjunction with a hernia repair, unless the member meets the criteria for panniculectomy stated in the Clinical Indications section 4. The excision of excessive skin and subcutaneous tissue is being performed for the purposes of relieving back or joint pain, unless the member meets the criteria for panniculectomy stated in the Clinical Indications section 5. The excision of excessive skin and subcutaneous tissue is being performed for cosmetic purposes (i.e., for the purpose of altering appearance) and is unrelated to physical disease or defect. 	€ 1,373	€ 659	€ 958	€ 412

4548	Liposuction for Lipoedema		yes		<p>Precertification is required. Benefit is payable for procedure code 4548 only in the following circumstances:</p> <ol style="list-style-type: none"> 1. Patient must have Symptoms of symmetrical fat distribution, pain, bruising and differentiated diagnosis from obesity and lymphedema. 2. It significantly interferes with the performance (impaired physical function) of normal activities of daily living. Ongoing pain caused by lipoedema tissue, documented psychological or lifestyle impact. 3. Failed conservative treatment- minimum of 6 months of compression therapy, manual lymphatic drainage, exercise and dietary management, no significant symptom relief. 4. Skin complications-chronic intertrigo (dermatitis occurring on opposed surfaces of the skin, skin irritation, infection or chafing) that consistently recurs over 3 months while receiving appropriate medical therapy, or remains refractory to appropriate medical therapy over a period of 3 months. 5. The Lipoedema is a stage 3 or above where the following grading applies. Stage 3 excessive fatty tissues accumulate more aggressively, leading to large folds or lobules of fat, mainly hanging from the inner thighs and under the knees. Your movement may be significantly impaired, leading to an increased risk of joint problems, venous diseases, and secondary health complications. Stage 4 Also Known as Lipo-Lymphedema) excessive fatty tissues accumulate more aggressively, leading to large folds or lobules of fat, mainly hanging from the inner thighs and under the knees. Your movement may be significantly impaired, leading to an increased risk of joint problems, venous diseases, and secondary health complications. 6. Treatment is once per limb per lifetime. Exclusions Irish Life Health does not consider liposuction for Lipoedema to be medically necessary under certain circumstances. Examples of such circumstances include, but are not limited to, the following: <ul style="list-style-type: none"> > The member has difficulty fitting in clothes. > Liposuction is being performed at the same time as bariatric surgery . > The liposuction is being performed for the purposes of relieving back or joint pain, unless the member meets the criteria for it stated in the Clinical Indications section. > The liposuction is being performed for cosmetic purposes (i.e., for the purpose of altering appearance) and is unrelated to physical disease or defect. 	€ 753	€ 339	€ 452	€ 203
